## SpellCheck RedSquiggles (2.1f)

You can choose to see words which have undecided or incorrect spelling status highlighted with a squiggly underline.

### How display spelling errors

- Open the **menu for the project**.
- Under **View**, click **Display Spelling Errors**.
  - *Words which are not known to be correct are now highlighted with a squiggly underline.*
- OR click Display spelling on toolbar.

### Red squiggles

A red squiggle is displayed on words which are incorrect or which Paratext calculates are probably incorrect.

### Grey squiggles

Grey indicates that Paratext doesn't know anything about the spelling status and can't work out if it is suspicious.

- *These words are all undecided.*

## Record the correct spelling

If a spelling is wrong, it is helpful to have Paratext record what the correction is.

- Right click the word.
  - *The Correct Spelling dialog opens.*
- Select one of the suggested spellings or type in the **Correct Spelling** box.
- To make the change click **OK**.
  - *Paratext saves the new spelling as correct, sets the old spelling to incorrect, saves the correction AND offers to make the change everywhere the old spelling is used.*

## Remove the squiggle

- Right click the word.
  - *The Correct Spelling dialog opens.*
- Click **OK**.
  - *Paratext saves the new status and removes the squiggle.*

## Right-click menu

- Right-click a squiggle a second time to get the menu
- If you wanted the Correct Spelling dialog, simply right click the word again.

- Right-click the word, choose Spelling to open the Correct Spelling dialog for this word.
